Submitted Questions	Answer
What is the difference between advance order promising and ATP?	“advance order promising” is the business area term which SAP uses on the solution capability map. ATP is another term with the capabilities. For comparison: Advanced ATP considers only one plant, not different plants through the whole supply chain. Global ATP considers different plants through the whole supply chain.
When will the Supply Chain area have its own S/4 Cloud learning journey and certification? All other areas (Finance, Manufacturing, Professional Services, etc) already have this but not Supply Chain. Thanks.	Starting with the 1902 release we will deliver a S/4HANA Cloud learning journey for Supply Chain. The colleagues from the learning hub team are still working on this requirement. With RTC they will deliver a first version of the learning journey and will enhance the content after RTC. Certification is also planned.
Love the fact we are getting the WM and Quality items - whats the plan for moving the UX to Fiori?	We are planning to deliver further SAP Fiori apps in S/4HANA Cloud Warehouse Management, for instance a new picking app is planned. But the WM Monitor app which was shown in the Show&Tell webinar is a visual harmonized GUI app which was inherited from EWM. Currently we do not have plans to reimplement the complex WM Monitor app because it works fine and it is very powerful for the user.
Is this the new front-end for S/4?	The new apps will be implemented as SAP Fiori apps. But currently we are using also a lot of proven GUI apps like the WM Monitor which are displayed as visual harmonized apps.
The PP-PI production method is available in S4HCloud???	PP-PI as you know from ECC is not available in S/4HANA Cloud. But starting with 1902 the process order will be enabled in S/4HANA Cloud with very limited capabilities. This is the starting point of a journey for enabling process manufacturing in S/4HANA Cloud. The PP-PI sheet is not available in S/4HANA Cloud. Currently a new implementation on SCP is in discussion.
Will there be any automation (heuristic for scheduling similar to PPDS)	No heuristic for scheduling similar to PPDS is currently planned. But it is planned to implement a visualization of the production scheduling in future releases.
can 1902 run with RF scanner? that means to set up mobil menu as well in the configuration	With the 1905 release we will offer APIs which allows partners and customers to implement customer- and device-specific RF scanning solutions in WM. See innovation discovery 1905 https://go.support.sap.com/innovationdiscovery/#/innovation/40F2E9281A631ED8979ADD75DA3980DD1908 https://go.support.sap.com/innovationdiscovery/#/innovation/6EAE8B28C5D91ED8979AE947038820CD
